

DP #6: Final Demo (12 points)

Demo Presentation on Monday, December 8

Submission due by Saturday, December 13 at 11:59 PM CT

Overview

The goal of this phase is to refine, enhance, and showcase the final state of your user interface with a polished, high-quality presentation. This process is crucial for both improving usability and ensuring that the UI meets professional design standards in preparation for the final evaluation. Through this effort, you will address any identified usability issues, make thoughtful design adjustments, and present a UI that is both functional and aesthetically refined.

UI Revise and Quality Improvement

- You will receive feedback from the teaching staff, including a list of heuristic violations noted by other students. Use this feedback and the list provided to revise your UI accordingly. You are expected to fix all heuristic violations and usability issues recommended by the teaching staff. If there are any issues you cannot reasonably address within the available time, provide a justification in your report explaining why they were not fixed.
- It is strongly recommended to address any additional, easy-to-fix issues on your own. Additionally, if you're aware of any major or minor usability issues (whether from personal observation or previous comments from the teaching staff during demos), list these issues, resolve them, and include an explanation of how they were addressed in your report.
- Enhance the overall quality of your UI for the final demo and submission. Pay close attention to design elements such as layout and color scheme, and follow good design principles to ensure a polished, professional appearance. This is your last opportunity to improve the quality of your UI before the final submission.

Preparing for Final Demo

- To ensure fairness for all teams, we will hold final demos on a single day, where each team will have a dedicated time slot to present their final UI. Each team will select a 15-minute time slot that works for all members to showcase their final demo.
 - **Date:** Monday, December 8
 - **Time:** 10:00 AM – 4:00 PM
 - **Place:** ECSS 3.621
- The sign-up link is <https://calendly.com/milab-utd/cs-cgs-4352-dp-6-final-demo> and will be available starting **Thursday, November 20, at 10:00 AM**. Only one team member needs to sign up for a time slot. Once a slot is selected, it will be removed from the list. If none of the available

slots work for your team, please email both the **instructor** (Jin.Kim@utdallas.edu) and **TA** (Daniel.Honrales@utdallas.edu) immediately to arrange an alternative. The link will close after 24 hours, on **Friday, November 21, at 10:00 AM**. **Failure to sign up for a time slot will result in a random slot being assigned to your team.**

- Each team must ensure that their **target device is prepared and that the UI is fully operational on this device** for the live demo. Please conduct a few rehearsals to guarantee a smooth presentation.
- Following the demo, teams will have additional time to make any final adjustments, with the final submission deadline on **Saturday, December 13**.

Documentation

- Create the following documents in PDF format:
 - Update the “Source” document to include a list of all external dependencies used in your implementation (e.g., React, Bootstrap, etc.). For each dependency, provide unique URLs to download the SDKs and detail how each one functions within your project. Also, include the link to the GitHub repository in the document.
 - Update a “ReadMe” document with any changes to your UI and explain its functionality. Include any specific requirements for running the UI (e.g., test user credentials, compatible browser or device settings). Ensure the instructions are clear and thorough, allowing anyone to set up and run the UI. Make sure to include installation requirements, operating instructions, and any known limitations of the implementation. Ideally, the prototype should be executable without needing to install additional software.
 - Update the “Team” document to list all team members and describe each person’s assigned tasks and contributions to the final implementation. Make sure to specify the roles of each member regarding their UI-level contributions.

Team Submission

- This submission will serve as a cumulative report, allowing you and your team to compile your findings from each stage of the design thinking process and reflect on how your project has evolved throughout the semester. Create a zip file (.zip) that contains Source, ReadMe, and Team documents (in PDF) and PowerPoint file (pptx). The PowerPoint file should include the following:
 - **Title Slide:**
 - Provide the project title, team name, and team member names.
 - **POV & Target Users:**
 - Clearly state the Point of View (POV) for your project. You can either use the one you have already developed or revise it if necessary.
 - In one sentence, describe who your target users are.

- **Tasks:**
 - List the three main tasks that your final prototype is capable of supporting (final).
- **UI Revise and Final Implementation:**
 - **Heuristic Violations:** List all heuristic violations and explain how you addressed them in DP6.
 - **Other Usability Issues:** List additional usability issues and explain how these were addressed in DP6.
 - **Libraries and Frameworks:** List external dependencies used in your implementation (e.g., React, Bootstrap).
 - **Quality arguments (limit: 500 words):** Provide compelling arguments on what makes your interface “great,” focusing on aspects such as unique features, visual design, usability, or novel UI components.
- **Prototype Details:**
 - **Target Device:** Specify the target device (e.g., iPhone, Android, tablet, PC).
 - **Operating System Version:** Indicate the minimum iOS or Android version required to run the prototype effectively (e.g., iOS 14.0 or higher, Android 10 or higher)
 - **URL and Access Information:**
 - Web-based UI: Provide a working URL and representative screenshots, ensuring the URL is functional for grading.
 - App-based UI: Provide a link to download the entire project in a zip file, along with representative screenshots. Ensure this link is also functional at grading time.
 - **Screenshots:** Include a few key screenshots that best showcase the uniqueness and functionality of your application.

Individual Submission

- Download the peer evaluation form from “Design Project->DP6-Peer Evaluation” section.
- Complete the form and submit it. The submission deadline is Saturday, December 13 at 11:59 PM CT. There will be a 1-point deduction for late or missed submissions.

Grading

- ☐ UI Revise (3)
 - Exceptional (3 points)

- All recommendations and identified issues are addressed with high-quality fixes.
- UI displays excellent usability, with no observed issues.
- All three required tasks are fully implemented and functional, with all necessary features included.
- Good (2 points)
 - Most recommendations and issues are addressed with good quality improvements.
 - No major usability issues are present.
 - All three tasks are implemented with necessary features, with no significant issues.
- Satisfactory (1 point)
 - Major recommendations and issues are mostly addressed, though some minor issues remain.
 - Some usability issues are present, though they are generally minor.
- Unsatisfactory (0 point)
 - Many recommendations and major issues are not addressed.
 - Significant usability issues are present, affecting UI functionality.

☐ Quality (4)

- Exceptional (4 points)
 - The prototype is highly creative, unique, and crafted with excellent quality.
 - Design shows exceptional layout, color choice, and adherence to design principles.
 - The UI is highly usable, running smoothly without errors or glitches.
- Good (3 points)
 - The prototype is well-made and runs smoothly, with no major errors.
 - UI layout and color choice demonstrate good design principles.
 - It is intuitive and easy to use.
- Satisfactory (2 point)
 - The prototype has an adequate level of detail and satisfactory quality.
 - Layouts and colors are satisfactory.
 - While easy to use once learned, minor issues or errors may be present.
- Unsatisfactory (0 point)
 - The prototype lacks detail or quality.
 - It is not user-friendly.
 - Major errors or issues prevent smooth operation.

☐ Demonstration (3)

- Exceptional (3 points)
 - The demo is meticulously prepared, with highly engaging and precise instructions.
 - It operates seamlessly and without interruption, showcasing all core functions or features effectively.
 - The presentation highlights additional insights or unique elements that

- enhance understanding, going beyond basic functionality.
 - The demo is shown on the designated target platform, utilizing platform-specific features where relevant.
 - Good (2 points)
 - The demo is well-prepared, and instructions are clearly delivered.
 - It runs smoothly without any significant issues.
 - The demonstration covers all essential aspects effectively on the designated target platform.
 - Satisfactory (1 point)
 - The demo is prepared but may contain minor issues; instructions are provided.
 - The demo is not shown on the designated target platform.
 - Unsatisfactory (0 points)
 - The demo is unprepared, or the application is non-functional.
- ☐ Documentation (2)
- Good (2 points)
 - Documentation includes clear, comprehensive descriptions of all essential information.
 - Satisfactory (1 point)
 - Documentation clearly describes all necessary details and is understandable.
 - Unsatisfactory (0 points)
 - Documentation is limited and does not adequately explain prototype functionality.

Deductions

Deductions will be applied as indicated below. The minimum possible score is 0 points.

- ☐ **UI Design Similarity: 12 points will be deducted** if your UI design is similar to existing UI.
- ☐ **Late Submission: 2 points will be deducted** for each day the submission is late.
- ☐ **Incomplete Source Document: 4 points will be deducted** if your Source document lacks the required information.
- ☐ **Incomplete ReadMe Document: 4 points will be deducted** if your ReadMe document does not clearly explain how to set up and run the project.
- ☐ **Non-functional Project: 10 points will be deducted** if your project does not properly work on the target device during initial grading.
- ☐ **Incorrect File Format: 1 point will be deducted** if the submission is not in a .pptx format.

- ☐ **Lack of Significant Individual Contribution: 6 points will be deducted** if you did not make a significant contribution to the submission (individual contribution will be evaluated based on peer evaluation).
- ☐ **No Individual Contribution: 12 points will be deducted** if you did not make any contribution to the submission (individual contribution will be evaluated based on peer evaluation).

Academic Integrity

This is a team assignment. Teams are expected to complete their own work. If found guilty of academic dishonesty, you will receive 0 points on this project.

These descriptions and timelines are subject to change at the discretion of the professor.
