

Heuristic Violated : H3: User Control and Freedom *

Severity Level : [1]

Task(s) Affected : [Complex Task]

Description :

The button for each of the settings is the text, but not the physical area around it including the arrow. I tried clicking on the arrow out of habit and was frustrated when the setting didn't open

Suggestion to Fix :

Increase area for clicking for each of the settings

Heuristic Violated : H4: Consistency and Standards *

Severity Level : [2]

Task(s) Affected : [All]

Description :

The text size varies from page to page, on the Contract Analysis and summary page the text is much larger but on the settings page, everything is very small and hard to read.

Suggestion to Fix :

Make the text the same size on the settings page as it is on the contract analysis page.

Heuristic Violated : H3: User Control and Freedom *

Severity Level : [2]

Task(s) Affected : [Complex Task]

Description :

When I click on settings, I am prompted to enter a password to confirm my identity, but not given an option to exit out of that screen (like for accidental clicking)

Suggestion to Fix :

Add a back button so users can leave the settings and not have to enter a password to exit

Heuristic Violated : H1: Visibility of System Status *

Severity Level : [1]

Task(s) Affected : [Task 1]

Description :

When asking a question about a scanned document (Task 1), the response bubble is cut off, making the answer partially hidden or unreadable. Even though the response is automatically generated and not a real conversation, users still expect to be able to clearly see the full text. Because the system displays an incomplete or visually clipped response, it fails to communicate the full information back to the user. This violates the Visibility of System Status heuristic, as the interface does not clearly show the results of the user's action.

Suggestion to Fix :

Ensure all response bubbles fully expand to show the complete text

Heuristic Violated : H4: Consistency and Standards *

Severity Level : [2]

Task(s) Affected : [Task 2]

Description :

On the Contract History page, the view and compare buttons are styled identically. Typically view is used more often than compare, but it seems to act like both buttons are primary. This violates the consistency and standards heuristic because interfaces should typically differentiate primary and secondary actions through distinct visual hierarchy, and this interface acts like these buttons have equal weight and will be viewed just as frequently. This directly affects Task 2 (reviewing and comparing documents) because users must frequently choose between viewing a contract or selecting it as part of a comparison.

Suggestion to Fix :

Make "View" the primary action with a stronger color or filled style, and present "Compare" as a secondary button

Heuristic Violated : H4: Consistency and Standards *

Severity Level : [1]

Task(s) Affected : [Moderate Task (Review past contracts and compare their terms to your current contract)]

Description :

Box to send a message is not at the bottom of the screen, there's a lot of white space between the box and the nav bar

User confused whether screen is scrolled upwards

Suggestion to Fix :

Move the box to the bottom of the screen, just above the nav bar

Helps external consistency – established convention is to place the messaging box at the bottom

Heuristic Violated : H5: Error Prevention *

Severity Level : [3]

Task(s) Affected : [Simple Task (Upload documents or ask camera to scan)]

Description :

After uploading a document, if you do not click “save to archive” and you click to a different tab, the contract is not saved

Suggestion to Fix :

Add a warning such as “Leave without saving?” to prevent users from accidentally switching to another tab if they intend to save the contract

Heuristic Violated : H8: Aesthetic & Minimalist Design *

Severity Level : [Medium]

Task(s) Affected : [All]

Description :

[Visual elements lack cohesion, spacing, and clarity, making the app appear unappealing or unfinished. Poor visual hierarchy affects user engagement.]

Suggestion to Fix :

[Improve layout spacing, use consistent color themes, add clear section headers, and enhance typography to create a more polished and inviting interface.]

Heuristic Violated : H4: Consistency and Standards *

Severity Level : [Medium]

Task(s) Affected : [Navigation]

Description :

[The back button is shaped inconsistently across screens, making the UI feel unstable and making navigation unpredictable.]

Suggestion to Fix :

[Standardize the back button's size, shape, icon style, and placement across all pages to align with common mobile patterns.]

Heuristic Violated : H6: Recognition Rather Than Recall *

Severity Level : [High]

Task(s) Affected : [Finding Information / Understanding Features]

Description :

[Important information is difficult to locate due to unclear labeling, lack of hierarchy, and hidden content. Users must rely on memory or guesswork to find what they need.]

Suggestion to Fix :

Improve discoverability with clearer labels, structured sections, intuitive grouping, and dashboard-style navigation.

Heuristic Violated : H2: Match Between System and Real World / H7: Flexibility & Efficiency of Use *

Severity Level : [Medium]

Task(s) Affected : [Navigating to Linked Content]

Description :

[Clickable links are limited to the text itself, rather than the entire box or section. Users expect the whole card/tile to be tappable, causing misclicks and frustration.]

Suggestion to Fix :

[Make entire containers (cards, rows, boxes) interactive, not just the text. Add hover/touch feedback to indicate tappable areas.]

Heuristic Violated : H3: Freedom *

Severity Level : [1]

Task(s) Affected : [Task 2]

Description :

When you click ask a question, it opens a new page, and if the user has a question on a certain part of the paragraphs, they would have to type everything out just to explain their question. There could be a button under each that would pop up a small prompt section and make it easier for the user to ask questions about the certain parts

Suggestion to Fix :

Add a small button under each section to make asking questions easier

Heuristic Violated : H8:Minimalism *

Severity Level : [3]

Task(s) Affected : [Task 1, Task]

Description :

The user is given too many information all at once. There are too many workings that can be overwhelming at first glance. The information should be given to the user in a more “clean” way so the user’s eyes don’t have to wander around to find what they are looking for.

Suggestion to Fix :

Shorten the summer, use bolding the make the important parts stand out.

Heuristic Violated : H5: Error Presentation *

Severity Level : [3]

Task(s) Affected : [Task 1]

Description :

There should be a way to go back after seeing the summary. The user may want to make changes and completely change or delete the document

Suggestion to Fix :

Add a way to go back to make changes and add a delete contract button

Heuristic Violated : H6: Recognition *

Severity Level : [3]

Task(s) Affected : [All]

Description :

There are no indications in the other pages for the filtering options which is very important when comparing the contracts. This page should be suggested to go to when looking at the summary or making comparisons. I had to toggle between pages to even see that I can state my own preferences

Suggestion to Fix :

Mention updating preferences and concerns when looking at the contracts.
